Behavior

JavaScript

HTML

Hypertext adalah text yang berhubungan dengan dokumen lain

Markup language adalah suatu set markup tag yang bertujuan untuk mendeskripsikan sebuah halaman.

CSS

Google

Stylesheets adalah suatu set aturan yang bertujuan untuk mendefinisikan bagaimana halaman HTML ditampilkan di browser

Low importance

High importance

Linked (external)
Embedded (internal)
Inline

JAVASCRIPT

JavaScript

Google

JavaScript is a client-side scripting language that runs entirely inside the web browser.

Javascript dapat digunakan untuk meningkatkan fungsionalitas website. Misalnya melakukan validasi form.

PHP

Google

PHP is the language that you use to make the server generate dynamic output.

By default, PHP documents end with the extension *.php*. When a web server encounters this extension in a requested file, it automatically passes it to the PHP processor.

Of course, web servers are highly configurable, and some web developers choose to force files ending with *.htm* or *.html* to also get parsed by the PHP processor, usually because they want to hide the fact that they are using PHP.

PHP IN ACTION

To trigger the PHP commands, you need to learn a new tag. The first part is:

<?php

closing part
is encountered, which looks like
this:

?>

```
<?php  
echo "Hello world";  
?>
```

PHP VARIABLE

```
<?php
```

```
$username = "Fried Smith";
```

```
?>
```

Terima kasih
